ABOUT ME

Motivated Software Engineering Intern with hands-on experience in software development and problem solving. Currently gaining practical industry experience while strengthening skills in modern web and application development. Passionate about building efficient, scalable solutions and continuously learning new technologies. Seeking an opportunity to contribute as an Associate Software Engineer while further developing technical expertise.

EDUCATION

BSc in Software Engineering **Nov 2025 - Aug 2026**
Cardiff Metropolotian Unviersity - UK (ICBT Campus)

Higher Diploma in Computing and Software Engineering **Nov 2023 - Aug 2025**
Cardiff Metropolotian Unviersity - UK (ICBT Campus)

Diploma in IT **May 2023 - Nov 2023**
ICBT Campus

PROFESSIONAL EXPERIENCE

Intern Software Engineer **Dec 2025 - June 2026**

Software Engineering Intern at Sunquick Lanka, gaining hands-on experience in software development, system support, and working with internal business applications while collaborating with development teams to improve system efficiency.

PROJECTS - INDUSTRY

Smart Dispenser Management System (Web + Mobile App)

- Developed a system to manage beverage dispensers across multiple locations.
- Implemented QR code scanning to identify and track each dispenser.
- Built features for technicians to report issues, update service status, and monitor device activity.
- Integrated backend APIs for real-time data synchronization between mobile and web platforms.

Internal Sales & Inventory Management System

- Contributed to a web-based internal system for handling sales operations and stock management.
- Implemented modules for request handling, approvals, and inventory tracking.
- Worked with DataTables to display and manage large datasets efficiently.
- Improved UI components using Bootstrap for better usability.

Ticketing / Maintenance Request System

- Developed a system for logging and managing technical issues and service tickets.
- Enabled creation of multiple tickets for multiple devices in a single request.
- Added workflow features such as status updates (e.g., partially approved, completed).

Invoice & Finance Module Enhancements

- Worked on invoice-related features including editing, validation, and data handling.
- Added fields like unit price, totals, and due date calculations.
- Improved backend validation and database interactions (CI4).

PROJECTS - PERSONAL

FlavourFindr – Recipe Discovery Web Application (MERN Stack) - Most recent

- Developed a full-stack web application using MongoDB, Express.js, React.js, and Node.js for recipe discovery and management
- Implemented ingredient-based search functionality to suggest recipes based on available ingredients
- Designed and integrated user authentication (JWT) with secure login and registration
- Built features for saving favorite recipes and uploading user-generated content
- Created responsive UI with filtering options for cuisine, meal type, and dietary preferences
- Integrated external APIs to enhance recipe data and provide additional details

TECHNICAL SKILLS

Programming Languages

- JavaScript
- PHP
- SQL

Frameworks & Technologies

- React.js
- CodeIgniter 4 (CI4)
- Bootstrap

Databases

- MySQL
- MongoDB

Backend Development

- Node.js
- Express.js
- CI4

SOFT SKILLS

- Communication Skills
- Teamwork & Collaboration
- Adaptability
- Attention to Detail
- Willingness to Learn
